

Power BI Final Project Documentation

Prepared By: Shrey Patel

Project Overview

The Sales Performance Analytics Dashboard was developed using Power BI to analyze sales, customers, products, returns, and regional performance. The dashboard provides interactive insights through KPIs, visualizations, drillthrough analysis, slicers, and time intelligence calculations.

Dataset Components

- Sales Fact – Transactional sales records
- Returns Fact – Product return information
- Customer Dimension – Customer details and region information
- Product Dimension – Product and category information
- Date Dimension – Date hierarchy for time intelligence
- Region Dimension – Regional segmentation

Dashboard Pages

- Main Dashboard – KPIs, sales trends, category analysis, regional performance and navigation buttons.
- Customer Analysis – Top customers, regional distribution and customer-level insights.
- Product Analysis – Product performance, category analysis and sales trends.
- Drillthrough Page – Detailed customer purchase analysis and product-level breakdown.

DAX Measures Implemented

- Total Sales
- Total Units Sold
- Total Returns
- Average Sales
- Customer Count
- Revenue
- Sales YTD
- Previous Year Sales
- YOY Growth Percentage
- Previous Month Sales
- MOM Growth Percentage
- Sales KPI Classification

Visualizations Used

- Cards and KPI Cards
- Line Charts
- Clustered Bar Charts
- Donut Charts
- Matrix and Tables
- Slicers
- Drillthrough Visuals
- Navigation Buttons
- Custom Tooltips

Additional Features

- Star Schema Data Model
- Bookmarks and Page Navigation
- Collapsible Slicer Panel
- Drill Up and Drill Down
- Conditional Formatting
- Mobile Layout Optimization
- Row Level Security (RLS)

Conclusion

This Power BI solution enables interactive business analysis and supports data-driven decision making through advanced reporting, filtering, and visualization capabilities.
